Draft Study Scope for the 2026-2027 NorthernGrid Planning Cycle

4

5

Member Planning Committee Approval Date: TBD

6

1 Executive Summary

2 This Study Scope outlines the NorthernGrid 2026-2027 regional transmission planning process, as
3 required under FERC Orders No. 890 and 1000, in accordance with each Enrolled Party's Open
4 Access Transmission Tariff (OATT) Attachment K – Regional Planning Process and NorthernGrid
5 Planning Agreement.
6

7 The NorthernGrid Regional Transmission Plan evaluates whether transmission needs within the
8 NorthernGrid may be satisfied by regional and/or interregional transmission projects. The NorthernGrid
9 Regional Transmission Plan provides valuable regional insight and information for all stakeholders to
10 consider and use in their respective decision-making processes.
11

12 The study scope for NorthernGrid's 2026-2027 Regional Transmission Plan was developed using the
13 following process:

- 14 • Identification of the Baseline Projects of Enrolled Parties. Baseline Projects are the transmission
15 projects included in the Enrolled Parties' Local Transmission Plans.
 - 16 • Evaluation of combinations of the Enrolled Parties Baseline Projects and Alternative Projects to
17 identify whether there may be a combination that effectively satisfies all Enrolled Party Needs.
 - 18 • Use of power flow and production cost analysis techniques to determine if the modeled
19 transmission system topology meets the system reliability performance requirements and
20 transmission needs.
 - 21 • Selection of the Regional Combination that effectively satisfies all Enrolled Party Needs into the
22 NorthernGrid Regional Transmission Plan.

2 [Regional Summary of Needs](#)

3 The regional needs were sourced from member data submissions, including load forecasts, resource
4 additions and retirements, anticipated transmission topology, and public policy requirements. Data
5 submissions were received from NorthernGrid's 13 members:

- 6 • Avista (AVA)
- 7 • Bonneville Power Administration (BPA)
- 8 • Chelan PUD (CHPD),
- 9 • Idaho Power Company (IPC)
- 10 • Montana Alberta Tie Line (MATL)
- 11 • NV Energy (NVE)
- 12 • NorthWestern Energy (NWMET)
- 13 • PacifiCorp East and West (PACE and PACW)
- 14 • Portland General Electric (PGE)
- 15 • Puget Sound Energy (PSE)
- 16 • Seattle City Light (SCL)
- 17 • Snohomish PUD (SNPD)
- 18 • Tacoma Power (TPWR)

1 Summary of NorthernGrid Data Submittals for the 2036 future.

- 2 • The total NorthernGrid footprint, non-coincident peak load is 139,666 MW
- 3 • There are 8,484 MW of planned retirements
- 4 • There are 85,174 MW of planned generation additions
- 5 • There is one Non-incumbent Regional project
 - 6 ○ Cascade Renewable Transmission System
- 7 • There are six Non-Incumbent Interregional projects
 - 8 ○ Walker River-Tesla 500 kV Transmission Project
 - 9 ○ Western Bounty Project 500 kV (DC)
 - 10 ○ Silver Rock Transmission
 - 11 ○ High West Transmission
 - 12 ○ Sagebrush-Johnnie Corner
 - 13 ○ Trout Canyon-Arden 500 kV line

27 Case Analysis

28 The NorthernGrid Regional Transmission Plan will assess the existing transmission system and
29 committed projects against combinations of planned and proposed transmission projects to
30 compare their ability to reliably serve the forecasted 2036 load and generation dispatch
31 conditions.

32
33 The NorthernGrid study effort will utilize a combination of posted power flow and production
34 cost base cases from the Western Electric Coordinating Council (WECC); these cases will be
35 modified for the purposes of this study. The hourly output from the production cost modeling
36 run will be used to select stressed conditions in the Western Interconnection for reliability
37 analysis. Multiple stress conditions will be analyzed for the 2026-2027 planning effort. Historical
38 flows in the interconnection suggest east to west from Idaho/Montana/Wyoming and north to

1 south into southern California are of interest. Recent operations suggest that flows in the
 2 opposite direction occur frequently enough to warrant analysis. Typically, a heavy summer
 3 condition results in thermal overloads and a light spring condition results in voltage excursions;
 4 both conditions will get captured in this 2026-2027 analysis.
 5

6 Cost Allocation

7 Three interregional projects submitted for Cost Allocation consideration in the 2026-2027 planning
 8 cycle.

16 Introduction and Purpose Statement

17 The objective of the transmission planning study is to produce the NorthernGrid Regional Transmission
 18 Plan, through the evaluation and selection of regional and interregional projects that effectively satisfy
 19 all the transmission needs within the NorthernGrid region. The regional needs were sourced from
 20 member data submissions, including load forecasts, resource additions and retirements, projected
 21 transmission, and public policy requirements.

22 The committees for NorthernGrid are as follows:

- 23 • **The Member Committee (MC)** is composed of NorthernGrid member representatives. The MC is
 24 responsible for membership approval, budget development and approval, and vendor
 25 management.
- 26 • **The Member Planning Committee (MPC)** is composed of transmission planner representatives
 27 from all NorthernGrid members. The MPC is responsible for development of the Regional
 28 Transmission Plan.
- 29 • **The Enrolled Parties Planning Committee** is composed of Federal Energy Regulatory
 30 Commission (FERC) jurisdictional utilities. Collectively these members are responsible for
 31 regional transmission planning compliance. There are two sub-committees of this primary
 32 committee:
 - 33 ○ **The Enrolled Parties and States Committee (EPSC)** is responsible for state engagement
 34 in the regional transmission planning process.

- **The Cost Allocation Task Force (CATF)** is composed of enrolled parties and states representatives and is responsible for cost allocation compliance.

Regional Transmission Plan Development

Regional Transmission Plan Development Process Overview

NorthernGrid began the process to develop a regional transmission plan by requesting members to submit data pertaining to forecasted loads, resource additions and retirements, transmission additions and upgrades, and public policy requirements. The plan spans the 2024-2036 time period.

The Regional Transmission Plan will be developed over the course of two years, beginning March 31, 2024, and ending December 31, 2025. A summary of the key deliverables in Year 1 and Year 2 is included below. Deliverables not defined by Attachment K are subject to change.

General Schedule and Deliverables

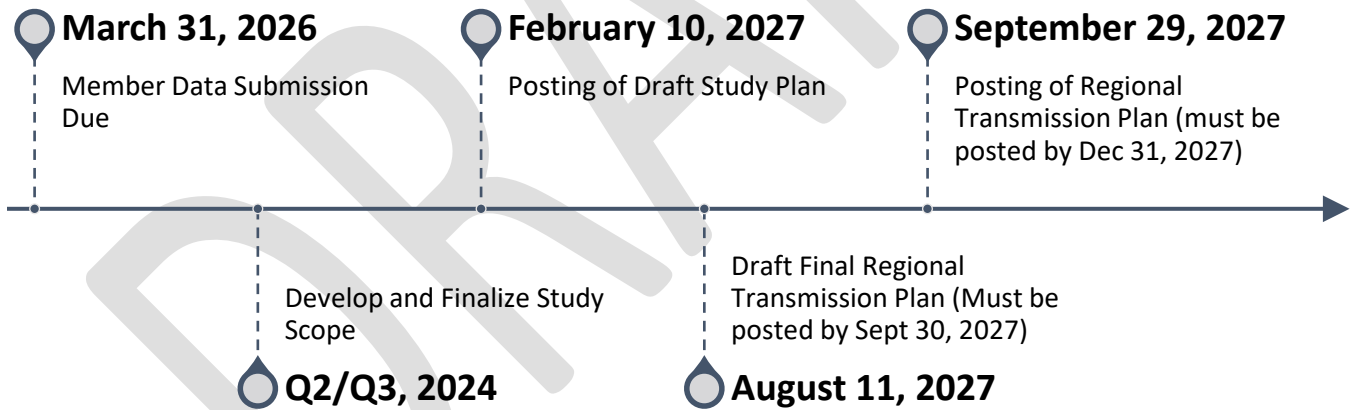

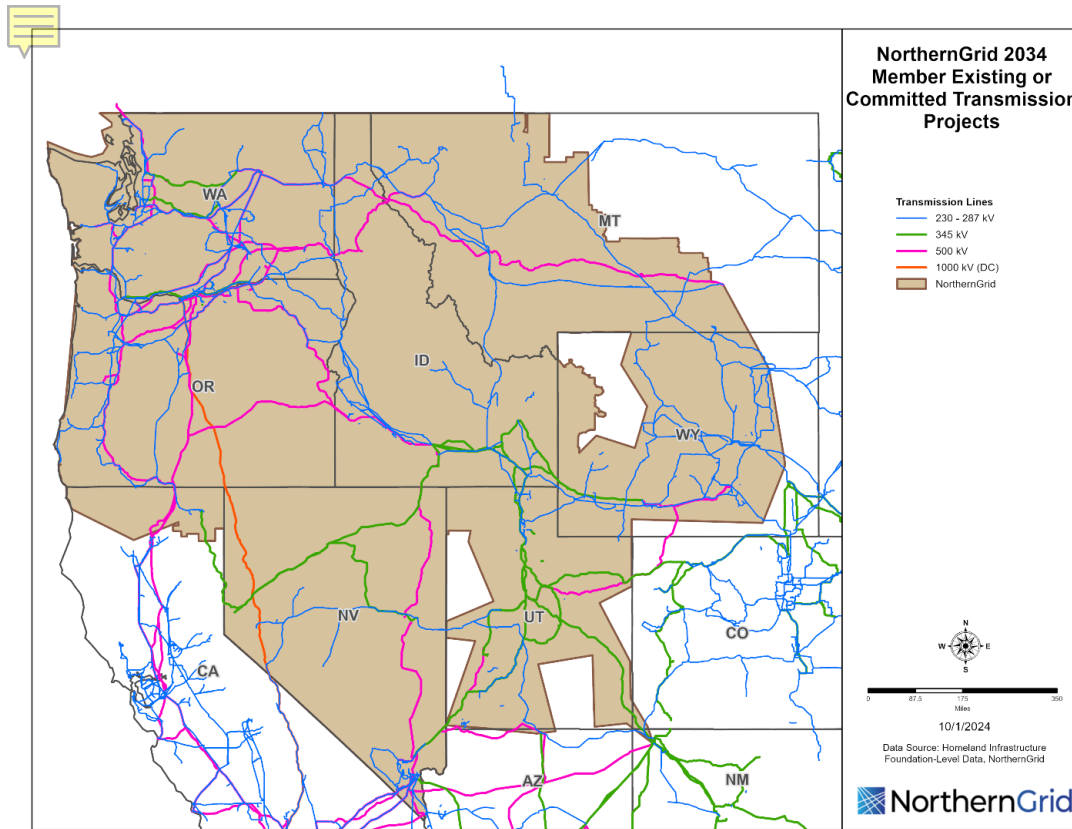

Figure 1: General Timeline of Deliverables

Stakeholder Engagement

Stakeholders including state agencies are invited to participate in the public meetings and comment periods. They will also have active involvement in the development of the Regional Transmission Plan. The first period for stakeholder comments begins with the publishing of the Draft Study Scope. There are three main opportunities to provide comment, and they are in response to the following publications: the Draft Study Scope, the Draft Regional Transmission Plan, and the Draft Final Regional Transmission Plan.

1
2 Figure 3: NorthernGrid Existing or Committed Transmission Projects

3 Data Submission Summary

4 This section summarizes the data submission results that NorthernGrid received from its 13 members.
 5 The NorthernGrid is made up of Avista (AVA), Bonneville Power Administration (BPA), Chelan PUD
 6 (CHPD), Idaho Power Company (IPC), Montana Alberta Tie Line (MATL), NV Energy (NVE), NorthWestern
 7 Energy (NWM), PacifiCorp East and West (PACE and PACW), Portland General Electric (PGE), Puget
 8 Sound Energy (PSE), Seattle City Light (SCL), Snohomish PUD (SNPD), and Tacoma Power (TPWR). The
 9 member Balancing Authority Areas (BAA) are illustrated in Figure 2.

10 The NorthernGrid members that are registered as Balancing Authority Areas are required to submit a
 11 ten-year load and resource forecast to the Western Electricity Coordinating Council (WECC) annually.
 12 This forecast includes identification of forecasted generation resources and transmission facilities.
 13 NorthernGrid leverages this submission for the biennial Regional Transmission Plan. Each member
 14 submitted their data and NorthernGrid summarized the data pertinent to the NorthernGrid region: load,
 15 generation resource retirements, generation resource additions, and 230 kV and above transmission
 16 additions. Resource additions do not necessarily reflect *planned* resource additions but may represent
 17 *conceptual* resource needs required to meet public policy goals. Conceptual resource needs are based
 18 on the existing Integrated Resource Plan (IRP) preferred portfolios and may change during subsequent
 19 Biennial Planning Cycles.

20

1 Local Transmission Projects

2 The NorthernGrid members have projected the need for new and upgraded transmission system
 3 projects in the local transmission planning processes. These projects primarily support local load service
 4 and reliability and have not been deemed to be regionally significant.

5 Loads Summary

6 *Table 1: NorthernGrid Loads, in MW*

Cycle	2024-2025	2026-2027
Year	2034	2036
Percent Change		14%
Jan	57,557	65,456
Feb	55,910	63,018
Mar	52,493	59,589
April	50,336	56,935
May	49,789	58,881
Jun	60,178	67,933
July	63,118	72,255
Aug	62,037	70,967
Sep	56,315	65,350
Oct	51,615	59,179
Nov	54,937	61,535
Dec	58,079	65,266

7 Table 1: NorthernGrid Loads represents the cumulative non-coincident peak load for each of the
 8 utilities that make up the NorthernGrid footprint. Overall, the NorthernGrid footprint load for 2036 is
 9 expected to be approximately 15% higher than the updated load prediction for 2034. The peak loading
 10 condition for NorthernGrid occurs in the summer which is consistent with the 2024-2025 cycle.

11

12 Resources Summary 2024-2036

13 There are approximately 85 GW of resources being developed within the NorthernGrid region along
 14 with approximately 8.6 GW of resources being retired.

15 All future resources are based on member resource planning processes. The NorthernGrid members
 16 determine resource additions through the development of their Loads and Resources needed for base
 17 case development. In some instances, the Integrated Resource Planning (IRP) requirements needed to
 18 meet state mandate may inform the development of the Loads and Resources data. Many of the
 19 resource additions presented are based on the existing IRP preferred portfolio which may change during
 20 subsequent biennial planning cycles. Members may include conceptual resource additions beyond what
 21 is included in their Loads and Resources submittal to more closely align resource needs with goals set
 22 forth by public policy requirements.

1 *Table 2: Generation Changes for the NorthernGrid Footprint*

	Addition	Retirement
Biomass	5	5
Bulk Storage	12,477	2
Coal	4,676	2,103

3

4 [Transmission Service Obligations](#)

5 Like loads, resources, and public policy, transmission service obligations may drive transmission
 6 development. The NorthernGrid members are encouraged to submit all transmission service data that is
 7 used in the development of their local transmission plan so that it may be considered during the
 8 development of the Regional Transmission Plan. No regionally significant transmission service
 9 arrangements were submitted for consideration into the 2026-2027 Study Plan.

10 [Regional and Interregional Transmission Projects](#)

11 Enrolled Parties as well as Developers submitted the regional projects depicted below.

1
2 *Figure 4: Submitted Regional and Interregional Transmission Projects*

3 **Member-Driven Transmission Projects**

4 The projects submitted by the NorthernGrid Parties are as follows:

5 **Committed Projects**

- 6 1. IPCO Barker Project
- 7 2. IPCO Bennett Mountain - Danskin - Rattlesnake 3-Terminal Line
- 8 3. PGN Bethel-Monitor 230 kV
- 9 4. PGN Bethel-Round Butte 500kV upgrade
- 10 5. IPCO Blacks Creek Solar
- 11 6. AVA Bluebird - Garden Springs 230kV Transmission Line
- 12 7. IPCO Boardman - Hemingway (B2H) Project
- 13 8. NEVP Comstock Meadows 345 kV Bus
- 14 9. IPCO Gateway West Transm. (Segment 8)
- 15 10. NEVP Greenlink North
- 16 11. NEVP Greenlink West
- 17 12. PGN Harborton-St Marys 230kV

- 4 14. NEVP HVD: Project AZ 2
- 5 15. NEVP HVD: Project Optimus
- 6 16. NEVP HVD: Project PR
- 7 17. NEVP HVD: Project Shintaku
- 8 18. BPA HVD: Project VIP Phase II
- 9 19. AVA La Pine-Bonanza Line
- 10 20. AVA Lewiston 230kV Mitigation
- 11 21. NWMT, IPCO Lolo – Oxbow Rebuild
- 12 22. NEVP M2I
- 13 23. NEVP NVE: Brooks 230/138 kV Substation
- 14 24. BPA NVE: LGIP Requirements
- 15 25. BPA PEARL-SHERWOOD-MCLOUGHLIN: UPGRADE 230 kV Lines
- 16 26. BPA ROCK CREEK-JOHN DAY-1 500KV LINE UPGRADE
- 17 27. BPA Ross-Rivergate Rebuild
- 18 28. BPA Schultz SHUL: INSTALL SERIES CAPS ON SHUL-RAVE-3&4 // Schultz-Raver No 3 & No 4
- 19 29. PSEI Schultz-Raver Reconductor and Paul Capacitor
- 20 30. PSEI White River – BPA Covington #1 & #2 230 kV Transmission Project

1 Non-Incumbent Transmission Projects

2 The NorthernGrid regional planning process allows non-incumbent and merchant transmission
 3 developers to submit projects for analysis. Several non-incumbent or merchant transmission projects
 4 were received during the submission period. They are further classified into regional and interregional
 5 transmission projects based on whether the project terminals are within the region or interconnect
 6 between regions, i.e. interregional.

7 1. Walker River-Tesla 500 kV Transmission Project

8 a. Cobalt Transmission Partners, LLC is proposing the Walker River-Tesla 500 kV project, a
 9 new 500 kV line from the NV Energy (new) Walker River substation to PG&E's Tesla
 10 substation. There are no proposed resources associated with this line. Cobalt
 11 Transmission Partners, LLC is not seeking Interregional Cost Allocation.

12 2. Western Bounty Project 500 kV (DC)

13 a. Western Bounty Project- ENGIE North America is proposing the Western Bounty
 14 Transmission System project, which is an interregional, +/- 525 kV HVDC transmission
 15 system that would enable 12 gigawatts of transmission capacity between the central
 16 'hub' in Nevada and the project's 4 termination points: SCE's Lugo-Vincent 500 kV line
 17 and LADWP's Adelanto Substation in California, BPA's Grizzly Substation in Oregon, and
 18 Idaho Power's Hemingway Substation in Idaho. ENGIE North America is not seeking
 19 Interregional Cost Allocation.

20 3. Silver Rock Transmission

21 a. Pattern Energy is proposing the Silver Rock Transmission project connecting the Millard
 22 County, Utah to the Eldorado substation in southern Nevada. The 500 kV line is
 23 expected to be able to deliver 1500 to 3000 MW. There are no resource additions
 24 associated with the Silver Rock Transmission project and Pattern Energy is not seeking
 25 Interregional Cost Allocation.

26 4. High West Transmission

27 a. GridLiance is proposing the High West Transmission project. The High West
 28 Transmission Project is comprised of the following:

- 29 i. New 135-mile 500 kV from Clover to Granite Peak
- 30 ii. New Red Butte 500 kV Switchyard with a 500/355 kV transformer
- 31 iii. New 105-mile 500 kV line from Granite Peak to the new 500 kV switchyard
- 32 iv. New 120-mile 500 kV line from RedButte to NV Energy's Harry Allen
- 33 v. New 53-mile 500 kV line from Harry Allen to Sloan Canyon.

34 b. GridLiance is proposing 2GW of geothermal associated with this project.

35 c. GridLiance is requesting Interregional Cost Allocation.

36 5. Sagebrush-Johnnie Corner

- 1 a. GridLiance is proposing the Sagebrush-Johnnie Corner project.
 - 2 i. New GridLiance West (GLW) Johnnie’s Corner substation with two 500/230 kV
 - 3 transformers
 - 4 ii. Relocate Johnnie-Corner-Valley Switching Station to new bay with a new
 - 5 500/230 kV transformer
 - 6 iii. Expand Sagebrush to allow for new bay
 - 7 iv. New 41-mile 500 kV line from GLW’s Johnnie Corner to Sagebrush substation
 - 8 with 4330 MVA rating
 - 9 v. New 58-mile 500 kV line from GLW’s Johnnie Corner to Northwest substation,
 - 10 assumed 4330 MVA rating
- 11 b. There are no new resources being proposed with the Sagebrush-Johnnie Corner project.
- 12 c. GridLiance is requesting Interregional Cost Allocation.
- 13 6. Trout Canyon-Arden 500 kV line
 - 14 a. Expand Trout Canyon
 - 15 b. New 500/230 transformer at Arden
 - 16 c. New 39-mile 500 kV line from Trout Canyon to Arden, 4330 MVA rating
 - 17 d. There are no resources associated with the Trout Canyon-Arden project.
 - 18 e. GridLiance is requesting Interregional Cost Allocation.
- 19 7. Cascade Renewable Transmission System
 - 20 a. Cascade Renewable Transmission System- PowerBridge is proposing to construct the
 - 21 Cascade Renewable Transmission System Project. This Project is a 100-mile, 1,100 MW
 - 22 transfer capacity +/- 400 kV HVDC underground cable (95 percent installed underwater)
 - 23 interconnecting with the grid through two +/- 1100 MW AC/DC converter stations
 - 24 interconnecting with the AC grid at Big Eddy and Harborton substations. There are no
 - 25 proposed generation resources associated with the transmission line. PowerBridge is
 - 26 not seeking Regional Cost Allocation.

27 [Alternative Projects](#)

28 The Enrolled Parties Planning Committee did not identify any Alternative Projects: no Alternative
 29 Projects were carried over from the 2024-2025 cycle and no new Alternative Projects were submitted at
 30 the beginning of the 2026-2027 planning cycle.

31 [Public Policy Requirements Summary](#)

32 [Approach](#)

33 NorthernGrid evaluated regional transmission needs driven by Public Policy Requirements by first
 34 identifying a list of enacted public policies that impact resource and local transmission plans in the
 35 NorthernGrid planning region. This data was procured through the NorthernGrid data submission
 36 process and polling of members to inquire about enacted policies that are driving their regional
 37 transmission needs. NorthernGrid identified enacted public policies in the states within the
 38 NorthernGrid region.

39 [Key Assumptions](#)

- 1 • Enacted policies include local, state, and federal policies for the NorthernGrid member service
- 2 area.
- 3 • Analysis focuses on enacted policies (through 2036) that address the type of energy portfolio to
- 4 be delivered.
- 5 • Non-enacted policies are not included in the analysis.
- 6 • Policies pertaining to energy purchases or corporate goals are not included.
- 7 • WECC will provide an initial production cost model, but it is the responsibility of the
- 8 NorthernGrid members to verify.
- 9 • Each member's IRP process incorporates public policy and the NorthernGrid members evaluate
- 10 their IRP to determine the data that is submitted.

11 Key Observations

- 12 • There are enacted public policies in six of the eight states, including the Renewable Portfolio
- 13 Standards (RPS) that exist in Washington, California, Oregon, Montana, Nevada, and Utah.
- 14 • There are no identified public policy requirements that are driving regional transmission needs
- 15 in Wyoming and Idaho.

16 Case Analysis

17 Methodology and Assumptions Overview

18 This methodology defines the analysis objectives, conditions (NorthernGrid transmission system
19 path stressing, power flow direction, imports/exports) necessary to assess the ability of the
20 transmission system to support the 2036 loads and resource, types of analysis, performance
21 criteria, paths to monitor, case checking and tuning (reactive devices, phase shifting
22 transformers) and contingencies. This process is designed to meet Order 890 and 1000 planning
23 requirements and is not intended to evaluate market efficiencies.

24 Analysis Objectives

25 The NorthernGrid Regional Transmission Plan will assess the existing transmission system and
26 committed projects against combinations of planned and proposed transmission projects to
27 compare their ability to reliably serve the forecasted 2036 load and generation dispatch
28 conditions.

29 Performance Criteria

30 The power flow simulations will be monitored for compliance with the North American
31 Electric Reliability Corporation (NERC) Reliability Standard TPL-001-5.1 and WECC Criterion TPL-001-
32 WECC-CRT-4 and TOP specific standards. The reliability standard requires transmission facilities to
33 operate within normal and emergency limits. The criterion further defines the default base planning
34 criteria for steady-state, post-contingency, dip, and recovery voltage along with oscillation dampening.
35 The WECC criteria also allow for transmission planners to apply a more or less stringent criterion for
36 their own system provided they gain agreement or allowance, respectively.

1 Base Case Conditions

2 The following conditions have been studied in the past as being of the most interest to the NorthernGrid
3 footprint and may be considered and subject to change for the 2026-2027 cycle:

- 4 1. Heavy system loading, lower renewable generation output
- 5 2. North to South, East to West interface flows
- 6 3. Low Hydro/End of Summer conditions
- 7 4. East to West interface flows
- 8 5. West to East interface flows
- 9 6. South to North interface flows
- 10 7. Summer peak loading condition
- 11 8. Winter peak loading condition
- 12 9. West of Cascades, North

13 Evaluation of Regional Transmission Project Combinations

14 To determine whether transmission needs within the NorthernGrid may be satisfied by regional
15 transmission projects, NorthernGrid evaluates combinations of the proposed regional and interregional
16 (if any) transmission projects independently and in regional combinations. The regional combinations
17 are determined by the MPC based on their knowledge of the NorthernGrid Region.

21 Impacts on Neighboring Regions

22 As stated above, the power flow cases represent the entire western interconnection. Therefore, during
23 the power flow analysis NorthernGrid will monitor for NERC standard and WECC criterion violations
24 occurring in the neighboring regions. Upon identification of a violation in a neighboring region,
25 NorthernGrid will coordinate with the region to confirm validity and whether the violation is due to an
26 existing condition. Mitigation plans for a violation will be determined in accordance with the
27 NorthernGrid Member tariffs and planning agreement.

28 Cost Allocation

29 Introduction

30 Regional project cost allocation is one of the FERC Order 1000 transmission planning reforms. The
31 NorthernGrid FERC jurisdictional entities, the Enrolled Parties, describe the requirements for a project in
32 their OATT Attachment K. The process begins with the sponsor/developer becoming qualified. The
33 following developers submitted information and were determined to be qualified.

34 Qualified Developers

35 GridLiance submitted developer qualification information which was reviewed by the Cost Allocation
36 Task Force (CATF) resulting in the approval of GridLiance as a Qualified Developer for this planning cycle.

- 1 Benefits and Beneficiary Analysis
- 2 If the Sponsored Project is selected into the plan as meeting Enrolled Party or Parties need, the project
- 3 benefits and beneficiaries will be determined. The cost allocation metrics and analysis process is
- 4 described in each Enrolled Party's OATT Attachment K – Regional Planning Process.

DRAFT
